

STREAMLINE EXHIBITION STANDS

1

Streamline contents will vary depending on the width of your stand

2

Place all the kit components on the floor in the area you are setting up the Streamline display.

3

Carefully remove wound graphics from inside the case.

4

Place the chrome inserts on top of the base and then screw the bottom sections of the poles into the bases.

5

Insert additional sections of the frame tubing into each base section. Ensure the magnetic tape faces the same direction on each pole section. The top sections have a gap between the magnetic tape and end of the pole.

6

Set up the poles and bases in the location and position as required.

7

All of your bases now have the support poles screwed in and secured.

Attach the graphics by hooking them over the top section of the poles. Ensure the hook goes into the box section and the magnets lock the graphic in place.

8

Attach all panels onto the poles. Ensure you line any graphics so the joins are not visible.

Once all panels are in place, move the stand around to create various shapes and curves to suit your requirements.

Did you know about our other Streamline products?

Add printed Universal panels to create a Bespoke Streamline Stand

Removing Graphics From Case

Step 1
Locate the first graphic panel as indicated by the polythene sleeve.

Step 2
Coil the graphic panel inwards, with both hands.

Remove the panel as shown in the illustration.

Step 3
Lift the graphic panel out slowly making sure you do not catch the panel on the remaining graphic panels.

Then follow the assembly instructions on attaching the graphic panels.

Step 4
The remaining graphic panels are shown in the storage case.

Follow steps 1 to 3 until all the graphic panels have been assembled.
