

Tex-Flex Display Stands

Scan our QR code to
view the full
assembly video

You'll receive the inner
tube system, printed
graphics and carry
bag.

The Tex-Flex range uses a universal internal pole system which makes assembly quick and easy.

The inner tube sections will be numbered, making it clear which sections should slot together.

Slot the poles together by pushing the raised circle down, slotting into the correct tube and turning until the raised circle slots clicks into the circle hole.

The graphics are supplied as 1 piece for either the single or double sided print.

Pull the sleeve like fabric over the assembled frame and zip shut at the bottom.
